Complementary DNA was synthesized from mRNA using a 3' anchored poly (dT) primer. ECORI adapters were ligated to the blunt-ended cDNA fragments followed by digestion with ECORI and HindIII. The CDNA fragments were directionally cloned into the ECORI-HindIII restriction were transformed into the BCORI-HindIII restriction were transformed into DH10B host cells (Gibco BRL). This library was constructed by Dr. Randy Shoemaker and Dr.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Washington University School of Medicine

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
Franting autoimmune diseases

Example 1: Page 19: 41pp: English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating crivity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or crivity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or c-terminal amidated or esterified forms of up to 60 mino acids, where the peptide-type compound comprises the formula: A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or amil amino acid; aa82 = R or L; aa83 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amil amino acid sequences related to a Class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytocoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with amitgenic peptides or proteins of interest to activate CTLS. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, or used for detection and diagnosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 17; Page 35; 41pp; English.
This sequence represents a specifically claimed immunomodulating
dimer peptide of the invention. A peptide-type compound or variant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
19-JUN-1998 (first entry)

Peptide B2702.84-79/79-84 tested for immunomodulating activity.

Immunomodulating dimer: immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;

claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal anidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (taa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = E or hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aarepresents amino acid; aa82 = R or L; aa83 = G or R; and aarepresents amino acid; absence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytocoxic rlymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proteins of interest to activate CTLs. They can also inhibit the cluss in response to anti-CD3. The peptide can be diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R82907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to abandant comparate to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-MAY-1996 (first entry)

PS Example 12, 29pp; English.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the protein associated with T-cell lysate. P74 is a T-cell surface membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Hsc70. P74 is found in a limited number of cell types, but is particularly captacessed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity expressed on B and T cells. P74 can be isolated by lysis of a suitable coll with an amphoteric detergent, and then passed through an affinity collum containing a covalently bound HiA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of P74 combined with the HLA-B2702.60-84 (see R95416), induces calcum influx, and inhibits compounds can be screened for their effect on the cytolytic activity of compounds can be screened for their effect on the cytolytic activity of determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by adding to the with the extracellular portion of p74, in an amount sufficient to compete component.
                                                       12-NOV-1996 (first entry)

Claim 2: Page 108-111; 171pp; English.
The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLAZ-10). The present sequence is human DTLR3 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins. The DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-MAR-1999 (first entry)
Human DNAX toll-like receptor DTLR3.

Human DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; Interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate

                                                                                                                                                                                                                                                                                                                                                                                                      haloperoxidase from Curvularia verruculosa - useful for oxidn. of halide, halogenation and, in presence of hydrogen peroxide and thiocyanate, as antimicrobial.

Claim 17: Page 38: 58pp: English

A haloperoxidase partial peptide (W12037) corresponds to amino acids 275-314 of the Curvularia verruculosa CBS.53 enzyme. Partial peptides (W12034-41) were obtd. from the haloperoxidase by digestion with lysyl-specific protease from Achromobacter. Primers (see also T51613-14) based on the peptides were used in the PCR emplification of genomic DNA from CBS 147.63. The PCR product was used to screen a genomic library, leading to the isolation of the haloperoxidase gene (T51612).
      immunity responses or morphological effects. The DTLR proteins can used in the treatment of conditions exhibiting abnormal expression the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.

                                                                           Haloperoxidase from Curvularia verruculosa - useful for oxidn. of
Haloperoxidase from Curvularia verruculosa - useful for oxidn. of
Haloperoxidase from Curvularia verruculosa peroxide and
Tathiocyanate, as antimicrobial
Claim 23; Page 36:37; Sapp; English.

The haloperoxidase of Curvularia verruculosa CBS. 63 shows optimum
activity at about 60 deg C and pH 5.5, retains at least 75%
activity after incubation for 1 hr at pH 7.0 and 60 deg C in the
presence of 0.1% H202, and prefers bromide over chloride ions as
substrate. It can be obtd. from a C. verruculosa fermentation
or by expression in host cells transformed with a vector carrying
the haloperoxidase gene (see also T51612). The isolated enzyme can
be used to oxidise halide to hypohalous acid in the presence of an
CH202 source, or to halogenate cpds. It can also, in the presence
of H202 and thlocyanate, be used as an antimicrobial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mersols 10207.

Use of halo:peroxidase enzymes - in antifouling paints and methods for determining the halide concn. of liquids

Example 3; Fig 6; 48pp; English.

Example 3; Fig 6; 48pp; English.

A chloroperoxidase (R82249) is obtd. by expression of a cDNA sequence (103875) isolated from Curvularia inaequalis in a procaryotic host. The apoprotein is activated by addn. of vanadate. The enzyme displays high thermostability (Tm 90 deg) and is stable in 40% methanol, ethanol or propanol. It can is used for the analysis of halide (esp: chloride) ions, e.g. in blood or withe. The enzyme may also be utilised as an environmentally-friendly antifouling agent in ship paint; it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                           Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. BELLOW R. Clayberger C. Krensky AM:

New I 198-086530/08.

New I munomodulating dimer peptide(s) - based on a Class I HLA-B

appha-1 domain, used for preventing rejection of transplants or

treating autoimmune diseases

Example 1: Page 19; 41pp; English.

CC the peptide-type compound comprises the formula; A-B, where A, B =

CC tarminal amino acid; aa80 = R or G; aa80 = I or N; aad1, aa84 = a hydrophobic or

CC small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino

CC acid The sequences in the brackets may optionally be absent or truncated

at any peptide type bond within the brackets. The compounds comprise

CC anino acid sequences related to a Class I HLA-B alphal domain (positions

CC anino acid sequences related to a class I HLA-B alphal domain (positions

CC undesirably attacking cells in a host or in vitro. They can also be

CC activate CTLs. They are also inhibit the proliferation of resistion

CC activate CTLs. They are also inhibit the proliferation of resistion

CC activate CTLs. They are also inhibit the proliferation of resistion

CC activate CTLs. They are also inhibit the proliferation of resistion

CC activate CTLs. They are also inhibit the proliferation of resistion

CC activate CTLs. They explide can be used for preventing rejection

CC relemmentoid arthritis and lupus erythematosis. The products can also be

CC rhemmenton arthritis and lupus erythematosis. The products can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
Peptide B2702.84-75/75-84T tested for immunomodulating activity. Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-MAY-1998 (first entry)
Human neuronal nicotinic acetylcholine receptor alpha-3 subunit.
Human; neuronal nicotinic acetylcholine receptor; alpha-3 subunit; brain tissue; screening; NAChR; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENOME POLYPROTEIN (COUTAINS: CAPSID PROTEIN C (CORE PROTEIN); MATRIX
PROTEIN (ENVELOPE GLYCOPROTEIN M); MAJOR ENVELOPE PROTEIN E;
NONSTRUCTURAL PROTEINS NS1, NS2B, NS4B, NS4B; HELICASE (NS3);
RNA-DIRECTED RNA POLYMERASE (EC 2.7.7.48) (NS5)].
Dengue virus type 2 (strain 16681).
Viruses; SSRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                              BLOK J., MCWILLIAM S.M., BUTLER H.C., GIBBS A.J., WEILLER G.,
HERRING B.L., HEMSLEY A.C., AASKOV J.G., YOKSAN S.,
BHAMARAPRAVATI N.;
"Comparison of a dengue-2 virus and its candidate vaccine derivative:
sequence relationships with the flaviviruses and other viruses.";
Virology 187:573-590(1992).

-! FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
-! SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                            PFAM; PF00869; Flavi_glycoprot; 1.

"I FUNCTION: THE SMALL PROTEINS NS2A, NS2A, NS4A AND NS4B ARE

HYDROPHORIAC., SUGGESTING A POSSIELE MEMBRANE-RELAFED FUNCTION.

"SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROFIEN BYNELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:

PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (16-5EP-1999) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Sep 22, 1999 this sequence version replaced gi:5916428.

* NOTE: This is a "working draft, sequence. It currently * consists of 89 contigs. The true order of the pieces * is not known and their order in this sequence record is
                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Deciphering the biology of Mycobacterium tuberculosis from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome blinding site sequence (optimally 5-13pp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Erratum:[[published erratum appears in Nature 1998 Nov 12;396(6707):190]]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1. .38110
